# The Southern Ocean

- connects major oceans and redistributes ocean properties
- crucial to global ocean and climate system
- problems with data collection (logistics, ice, rough weather)

(Lumpkin & Speer 2007)

(Rintoul et al. 2013)

# Autonomous sampling devices: Argo

- Argo floats play important role
- Argo limitations south of 60°S (ice and advection)

(<https://samspostgrads.wordpress.com>)

(<http://www.argo.ucsd.edu/pictures.html>)

# Mapping with *oce*

- <https://github.com/dankelley/oce> [thanks & credit to Dan Kelley & Clark Richards]
- *oce* code to go from lon/lat space to x/y space

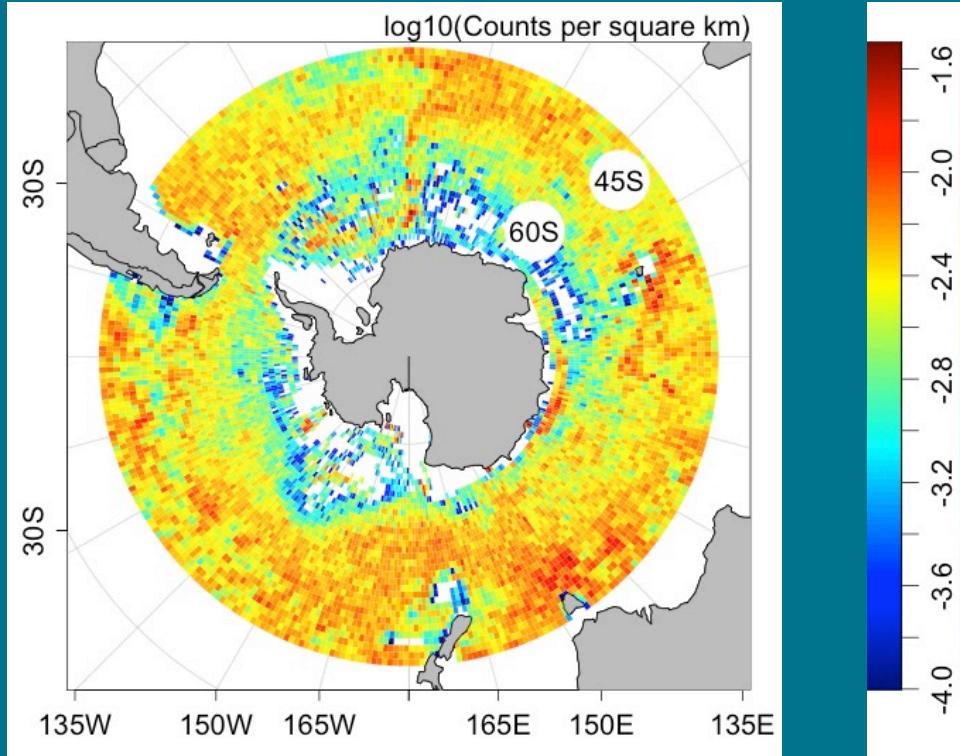

```
> b <- binCount2D(rlon, rlat, seq(-180, 180, 1), seq(-90, 90, 1))
> dims <- dim(b$number)
> llon <- b$xmids
> llat <- b$ymids
> R <- 6371
> deg2rad <- pi/180
> dlon <- diff(llon)[1]
> dlat <- diff(llat)[1]
> LON <- array(expand.grid(llon, llat)[,1], dim=dims)
> LON1 <- LON - dlon/2
> LON2 <- LON + dlon/2
> LAT <- array(expand.grid(llon, llat)[,2], dim=dims)
> LAT1 <- LAT - dlat/2
> LAT2 <- LAT + dlat/2
> A <- 2*pi*R^2 * abs( sin(LAT1*deg2rad) - sin(LAT2*deg2rad) ) * abs(LON1 - LON2)/360

> normalizedCounts <- log10(b$number/A)
> normalizedCounts[is.infinite(normalizedCounts)] <- NA
...
> cm <- colormap(normalizedCounts, col=oce.colorsJet, missingColor=NA, zlim = c(-4.0, -1.5))
> mapPlot(coastlineWorld, projection="+proj=stere +lat_0=-90", longitudelim=c(-180,180), latitudelim=c(-90,-39), col="lightgray")
> mapImage(b$xmids, b$ymids, normalizedCounts, colormap=cm)
> mapPolygon(coastlineWorld, col='lightgray', border = NA)
> drawPalette(colormap=cm, fullpage=TRUE, col=oce.colorsJet, zlim = c(-4.0, -1.5))
...
```

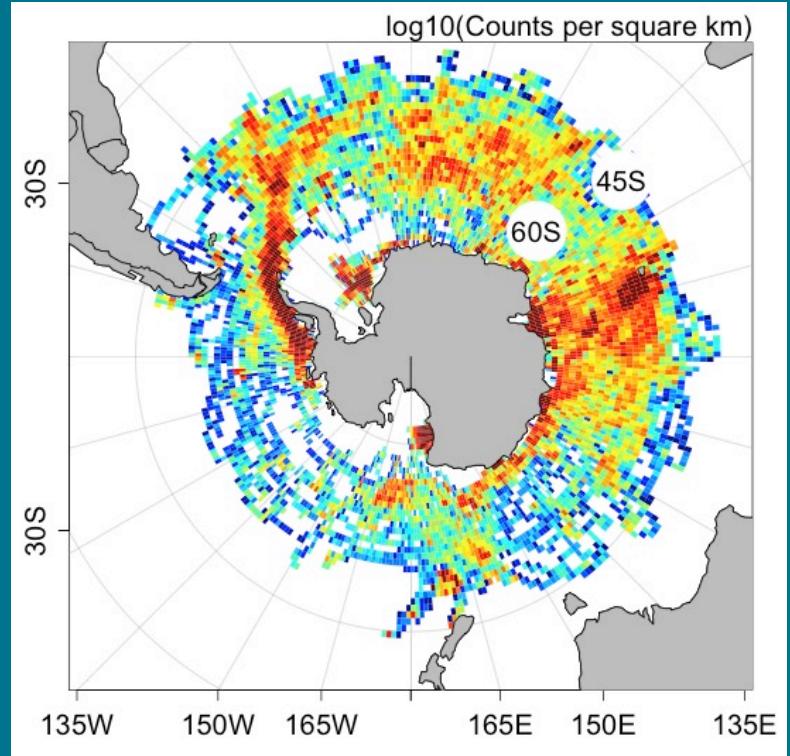

# Mapping with *oce*: all data (2004 - 2016)

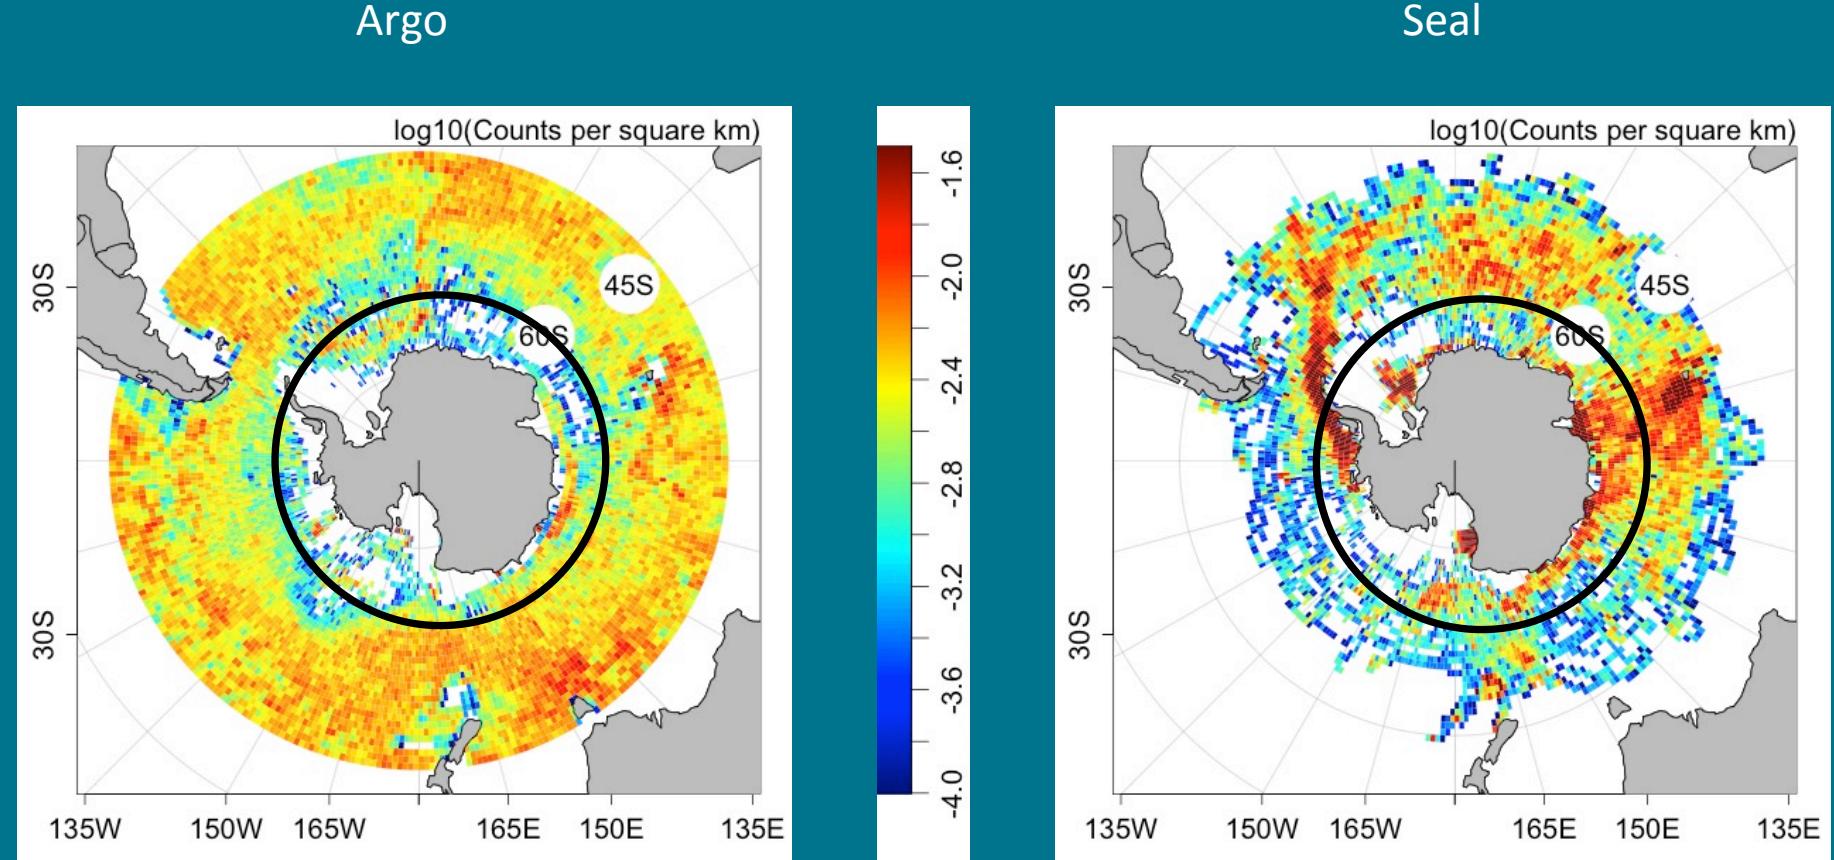

Argo

Seal

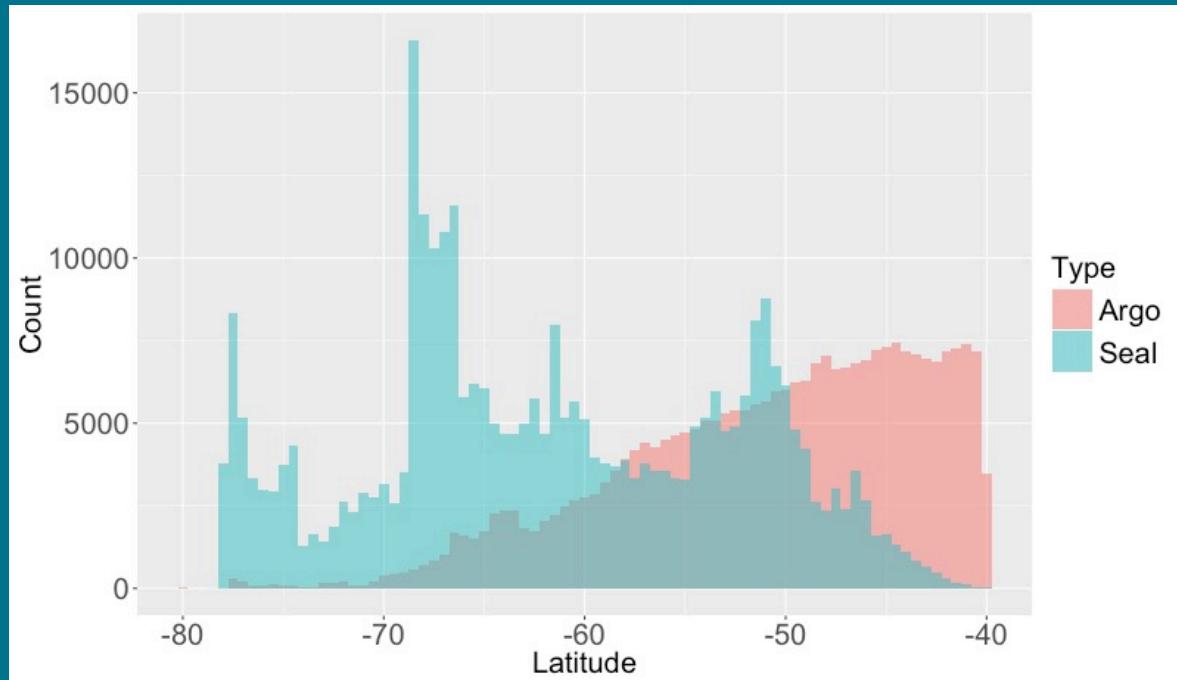

# Mapping with *oce*: all data (2004 - 2016)

# Latitudinal comparison with *ggplot2*

- Overlaid histogram

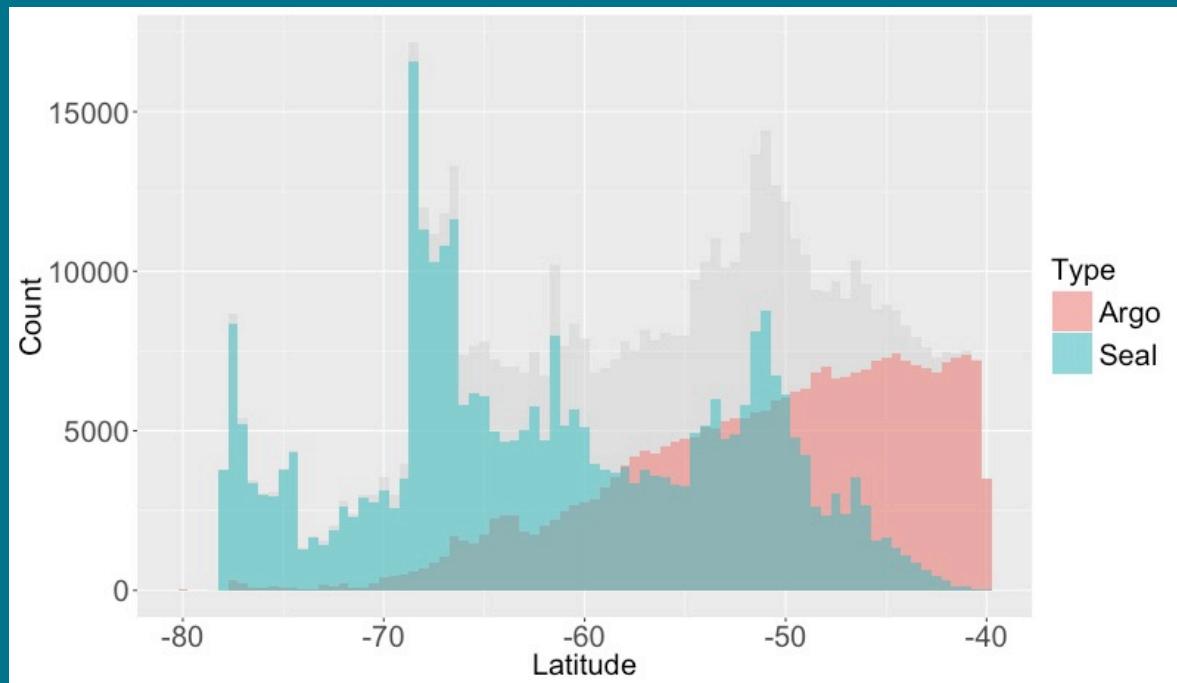

```
> ggplot(dat, aes(x = Lat, fill = Type)) +  
  geom_histogram(binwidth = 0.5, alpha = 0.5, position = "identity") +  
  theme(...) + xlab(...) + ylab(...)
```

# Latitudinal comparison with *ggplot2*

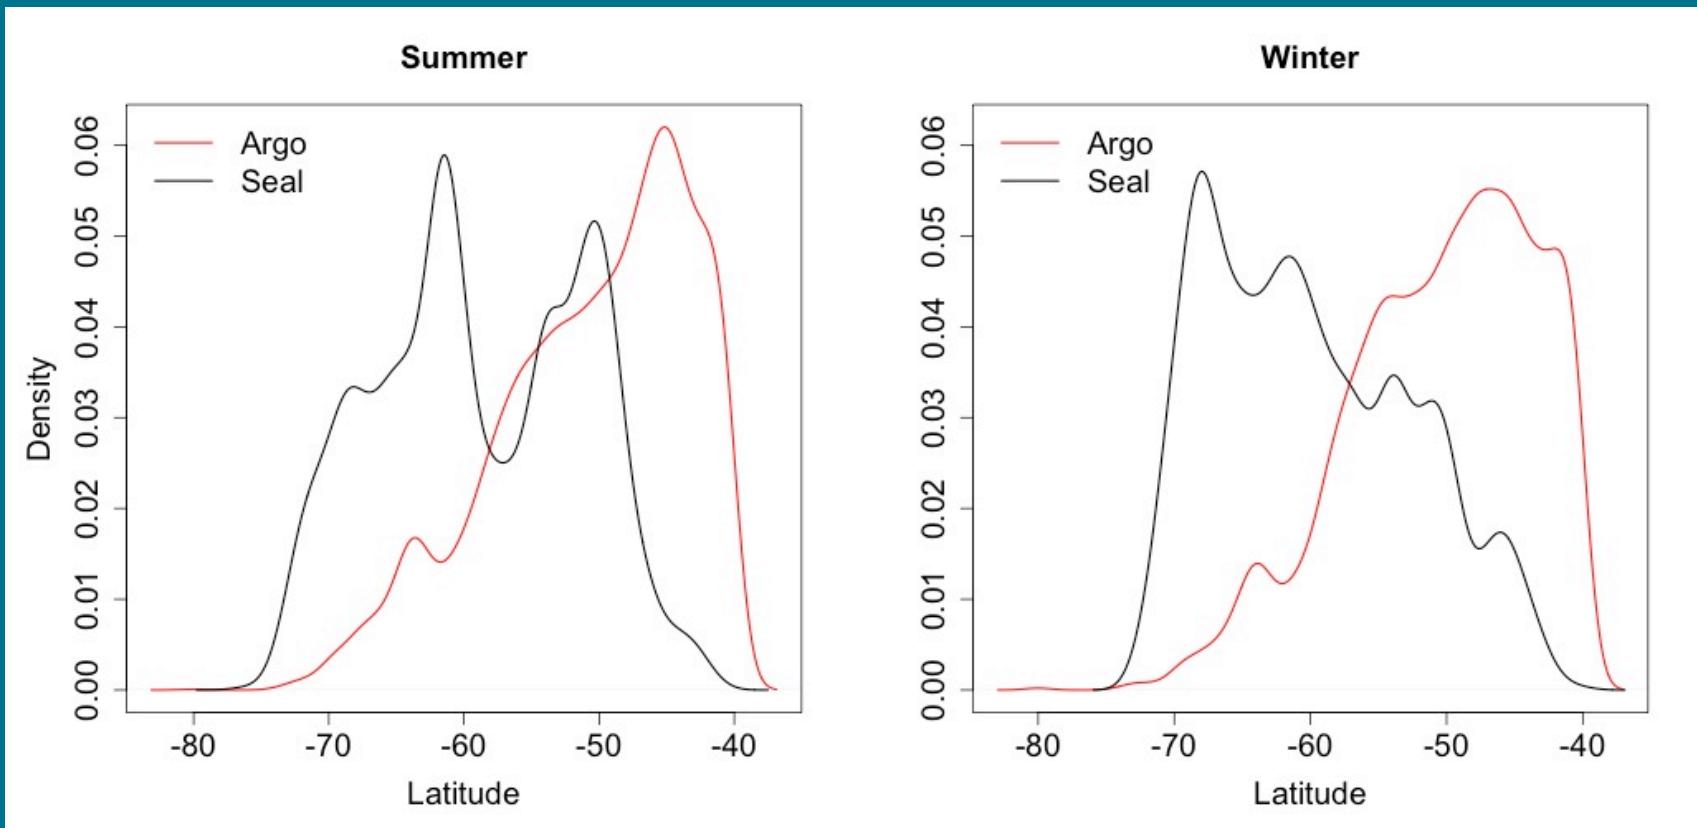

- Overlaid histogram

```
> d_bg <- dat[, -4] # Background Data - full without the 4th column (Type)
> ggplot(dat, aes(x = Lat, fill = Type)) +
  geom_histogram(data = d_bg, fill = "lightgrey", binwidth = 0.5, alpha = 0.5) +
  geom_histogram(...) + theme(...) + xlab(...) + ylab(...)
```

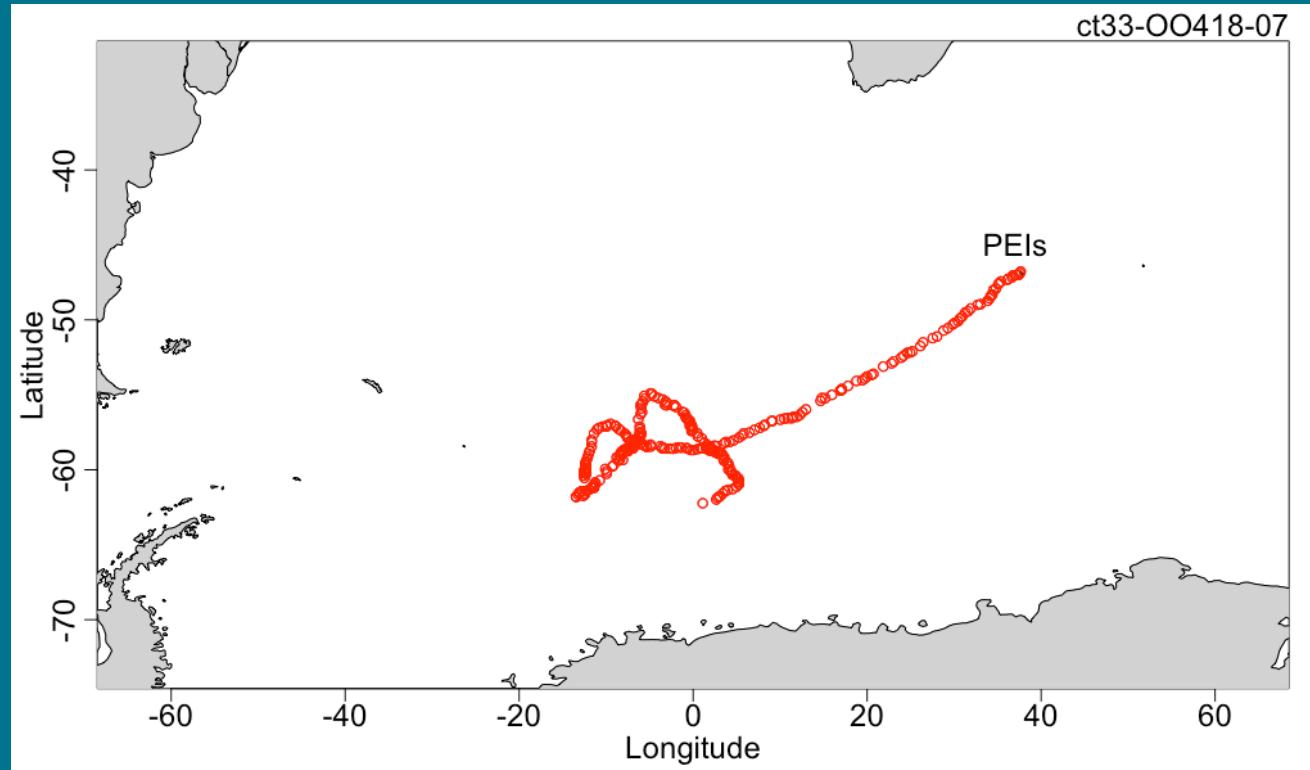

# Kernel density distribution of seasonal profiles

- *density()* in *stats* package

# Closer look at the data with *oce*

```
> d <- read.argo("ct33-OO418-07_prof.nc")      # 1 seal track  
> data(coastlineWorld)  
> plot(d, ...)
```

# Closer look at the data with *oce*

```
> summary(d)
```

Argo Summary
